1) The physical data contained in this table are typical values and reflect the current state of our knowledge. The data are arithmetic average values which are tested by test specimens made out of rods (\varnothing 40-60 mm). These has to be understood as guidelines, and shall not be used for specification purposes for finished parts. Missing data are completed by data of the raw materials.

5) Physiological indifferences are valid for nature coloured materials on the raw material side. There are also approvals for our semi-finished products available or in preparation. Please check this separately with us. 6) valid for nature coloured materials. An additional UV protection can be taken over by special pigments e.g. carbon black. 7) Test results without UL registration 8) Data are only valid for natural colours

9) Data taken from raw material *Self-assessment without test certificate * Own classification without official test report

+ = yes o = limited - = no/no data available
